

# A Total Appliance Solution

Flextronics provides integrated solutions to the home appliance, personal appliance, outdoor appliance, floor care, and HVAC industries. We operate on a global basis with high vertical integration, enabling us to reduce our customers' management complexity and cost, while increasing quality and speed to market.

As the leading supplier to the appliance industry, Flextronics has the most diverse capabilities and vertical integration in the industry. Our appliance division is the only supplier that provides a complete integrated product.

Our electronic and mechanical design capabilities allow us to support our customers in original design and manufacturing and joint development manufacturing projects with industry leading technologies that include Smart Appliances and the Connected Home. We use our capabilities to produce comprehensive solutions in components, integrated systems, and complete integrated product solutions that reduce project complexity.

## Our Network

- Shah Alam, Malaysia
- Philippines

## Our value proposition includes:

- **Dedicated appliances sites** that support our customers in quality, cost, and speed to market, including "mega launches."
- **Vertical capabilities** that reduce management complexity, workloads, and NRE costs.
- **Dedicated tooling design and manufacturing** that perform at specified rates and require no additional repair cost for tool break downs.
- **A global reach** with regional production sites that assures low cost supply and back up resources, if needed.
- **Class "A" surface painting systems** that meet the complexity of new paints with capacity for increased color volume.
- **Full time NPI teams** with extensive appliance experience.
- **End-to-end, complete product solutions** for a low capital extension of your production operation.
